

# Junior QA

## Homework task

### Manual part:

#### TASK:

1. Go to [www.google.com](http://www.google.com) and think of what the testable points might be. Write out 5-10 test cases in order of importance that you can come up with to test the functionality of the page.

### Automation part (optional):

#### TASK:

1. Using NodeJS, create a script that:  
navigates to “<https://www.tesonet.com>”, THEN  
click button “career”, THEN  
count the number of categories available. In example, there could be 4 categories available: CustomerSuccess, Marketing, Tech, Various.

The solution must contain code and instructions how to run it.
